

Managing Projects Using Azure Boards

MPAB | 1 Day

Plan, track, and manage your team's work with Azure Boards. This one-day course is designed to help agile teams configure and use Azure Boards to run the full cycle, from building and refining a Product Backlog to planning and managing a Sprint. You'll work in teams in a shared project on a common case study, putting each capability to use the way a real agile team would.

Who should take this course?

This course is for anyone on a software development team, especially those who create and refine a product backlog or plan and execute work within a sprint. It's equally valuable for people outside the development team, including managers, Scrum Masters, coaches, and other stakeholders, who want hands-on exposure to what Azure Boards can do. Some project management and software development experience, as a team member or a manager, is recommended. Experience with agile development, Scrum, and Visual Studio is helpful but not required. Attendees should read and be familiar with the [Scrum Guide](#) prior to class.

Course content

This course progressively builds your fluency with Azure Boards, from setting up a project and building a Product Backlog to planning and managing a Sprint. You'll work hands-on in teams on a common case study in a shared project, the way a real agile team would.

1. INTRODUCTION TO AZURE BOARDS

- Azure DevOps overview
- Azure Boards overview
- Creating and configuring a project
- Securing a project
- Teams, profiles, and notifications
- Extending Azure Boards
- Creating and using a wiki
- Hands-on lab

2. THE PRODUCT BACKLOG

- Process overview
- Working with the backlog
- Product Backlog Item vs. Bug work item types
- Features and Epics backlogs
- Decomposing large items
- The Kanban board
- Tagging, querying, and charting work items
- Hands-on lab

3. PLANNING AND MANAGING A SPRINT

- Planning a Sprint: Goal, forecast, and plan
- Setting up the Sprint and the Sprint Backlog
- The Task and Test Case work item types
- Working with the Task Board
- Collaborating as a team and daily activities
- Pairing, swarming, and mobbing
- Implementing a Definition of Done
- Assessing and tracking progress
- Completing a Sprint and splitting unfinished items
- Hands-on lab

Course Designer

This course was designed by Richard Hundhausen, Microsoft's first Visual Studio ALM/DevOps MVP, a Professional Scrum Trainer, and co-creator of the Nexus framework, with decades helping teams build and ship software. To see other Azure DevOps and GitHub courses, visit www.accentient.com.
