

Practicing Kanban Using Jira

PKJ | 1 Day

Increase your team's flow and throughput by pairing Kanban with Jira. This one-day course introduces Kanban's principles and core practices, then shows how an agile team configures and uses Jira to visualize work, limit WIP, and manage for flow. You'll work in teams, in a shared project on a common case study, putting each practice to use the way a real agile team would.

Who should take this course?

This course is for all members of a software development team, especially those who create and refine a product backlog or plan and execute the work. It's equally valuable for people outside the development team, including managers, Scrum Masters, coaches, and other stakeholders interested in establishing and improving flow. Teams currently practicing Scrum should consider attending too, since Kanban is a great complementary practice for managing and improving flow. For more, read this [guide](#).

Course content

This course progressively builds your fluency with Kanban and Jira, from core practices and workflow visualization to limiting WIP and managing for flow with flow-based metrics. You'll work hands-on in teams on a common case study, the way a real agile team would.

1. INTRODUCTION TO KANBAN

- Kanban overview
- Kanban core practices
- Kanban support in Jira
- Configuring a Jira project
- Managing work in Jira Cloud
- Managing a product backlog
- Hands-on lab

3. LIMITING WIP

- Work in Progress (WIP) overview
- Visualizing and setting WIP limits
- Applying WIP limits to multiple swimlanes
- Creating a pull system
- WIP limit challenges
- Identifying and mitigating bottlenecks
- Hands-on lab

2. VISUALIZING THE WORKFLOW

- Kanban board overview
- Kanban board vs. backlog
- Kanban board vs. Scrum board
- Quick filters, card styles, and printing
- Defining the workflow
- Mapping the workflow in Jira
- Enabling the Kanban Backlog
- Making policies explicit
- Definition of Done
- Classes of service (swimlanes)
- Creating additional boards and workflows
- Hands-on lab

4. MANAGING FOR FLOW

- Flow-based metrics
- Cycle time vs. lead time
- Little's Law
- Flow-based analytics
- Cumulative Flow Diagrams, control charts, and aging charts
- Flow analytics tooling
- Monte Carlo simulation
- Achieving flow and increasing predictability
- Hands-on lab

Course Designer

This course was designed by Richard Hundhausen, a Professional Scrum Trainer and co-creator of the Nexus framework, with decades helping teams build and ship software. To see other agile and Kanban courses, visit www.accentient.com.
