

Scrum for Product Owners

S4PO | 1 day

Get more value from your product by mastering the Product Owner accountability. This course gives existing and aspiring Product Owners the responsibilities and preferred practices of the role, from shaping and refining the Product Backlog to estimating, getting work done, and enabling delivery across the organization. You'll work in teams on a shared case study throughout, putting each practice to use the way a real Scrum Team would.

Who should take this course?

This course is for existing or candidate Product Owners who want to focus on the expectations and activities of their role. It's equally valuable for the business analysts, subject matter experts, and other stakeholders who work with a Product Owner to deliver a product of the highest value. Some experience on a Scrum Team or recent Scrum training is helpful; attendees should review the latest Scrum Guide beforehand.

Course content

This course progressively builds your fluency with the Product Owner accountability, from the Scrum framework and the realities behind common myths to refining and ordering the Product Backlog, estimating, and enabling value delivery across the organization. You'll work hands-on in teams on a shared case study, the way a real Scrum Team would.

1. The Scrum Framework

- The Scrum Guide
- The Scrum Framework
- Accountabilities, events, artifacts
- Professional Scrum

2. Myths and Misconceptions
